

The korigamik class

Kushagra Lakhwani^a

v1.10 June 24, 2023

Abstract

KorigamiK is a L^AT_EX class used for typesetting documents for university or school projects and lab reports. It is based on the article class with modifications to allow for more flexible front-matter among other changes. Please file bug reports and feature requests on the GitHub repository^b.

1 Usage

==== Put descriptive text here. ====

1.1 Package Options

`nopar` = $\langle boolean \rangle$ (default: `false`)
Changes the initial default separator between each paragraph of `\lipsum` from `\par` to `\space`, and the other way around for `\lipsum*`.

1.2 User Commands

`\lipsum` $\backslash\text{lipsum}\langle*\rangle[\langle par\ range\rangle][\langle sentence\ range\rangle]$

`\lipsum` outputs the $\langle par\ range \rangle$ from the currently active dummy text. If $\langle par\ range \rangle$ is not given or is empty, the `default-range` (initially 1-7) is output. If a $\langle sentence\ range \rangle$ is given, the selected paragraphs are split into sentences, numbered starting from 1, and the specified range of sentences is taken out from those paragraphs. If the $\langle * \rangle$ version is used, a different set of separators is inserted around the paragraphs or sentences.

`\lipsum` changes the active language to that of the dummy text for typesetting, so the proper hyphenation patterns are used.

Change History

v1.00

General: First public release 1

v1.10

General: Added documentation and
fixed bugs 1

Index

The italic numbers denote the pages where the corresponding entry is described, numbers underlined point to the definition, all others indicate the places where it is used.
