

The `korigamik` class ^{*}

Kushagra Lakhwani[†]

2023/06/24

Abstract

==== Put abstract text here. ====

1 Usage

==== Put descriptive text here. ====

`\dummyMacro` This macro does nothing. It is merely an example. If this were a real macro, you would put a paragraph here describing what the macro is supposed to do, what its mandatory and optional arguments are, and so forth.

`dummyEnv (env.)` This environment does nothing. It is merely an example. If this were a real environment, you would put a paragraph here describing what the environment is supposed to do, what its mandatory and optional arguments are, and so forth.

2 Implementation

```
1 <*class>
2 \LoadClass[a4paper,fleqn]{article}

\dummyMacro This is a dummy macro. If it did anything, we'd describe its implementation here.
3 \newcommand{\dummyMacro}{}

dummyEnv (env.) This is a dummy environment. If it did anything, we'd describe its implementation here.
4 \newenvironment{dummyEnv}{%
5 }{%
6 }

Don't use % to introduce a code comment within a macrocode environment. Instead, you
should typeset all of your comments with LaTeX—doing so gives much prettier results.
For comments within a macro/environment body, just do an \end{macrocode}, include
some commentary, and do another \begin{macrocode}. It's that simple.

7 \endinput
8 </class>
```

3 Change History

v1.00	log entry to show what a change
General: First public release	<i>within</i> an environment definition
v1.00a	looks like.
dummyEnv: Added a spurious change	

^{*}This file describes version v1.00, last revised 2023/06/24.
